

Transponders

We are just looking at this and want peoples options!!!!

We are looking at trying to buy the loop, hardware and software for the transponders this year if we can. There have been several ideas on how we can acquire all the transponders that we need without the club going into debt for them.

If you choose to buy one yourself you will have 2 options:

Hard wired in and left on car at all times (\$180.00)

Or

Rechargeable, you take off and on the car and charge each week
Transponder \$185.00 plus personal charger \$30.00

Bracket for both to put on the car \$4.50 or Pouch \$9.00

None of these prices include shipping or taxes.

If you don't buy one you will need to rent one each week at the track for a fee and a deposit. Everyone that doesn't have a bracket or a pouch will have to purchase one of them.

Some of the guys seem to think that some people would possibly buy 2 and let the track use 1 of them. The rent money would go to the one that bought it until it was paid for.

There are a lot of advantages to owning your own. You can get a lap receiver and know what your car is doing every lap. It is also uploaded to the Internet so when you get home you can print it out. It would also carry your information and I am pretty sure that it will work with the other transponder systems in the area so you would be able to just give them a number and it will work.
